Women, children & adolescents first

The GFF is the innovative approach to significantly increase investment in the health of their people.

GFF

Mobilize countries’ own funding and:

- Link to World Bank (IDA/IBRD) concessional financing
- Align external finance
- Attract private sector funding including foundations

How the GFF helps countries bridge the financing gap for health

Empowering countries to transform health

- How the GFF works to reduce fragmentation – a country led process.
- Countries use modest GFF Trust Fund grants catalytically – significantly increasing domestic resources alongside external, private sector and concessional financing.
- In every country a tailored approach supports governments to address unique challenges. GFF countries are making progress.

Replenishing the GFF Trust Fund will contribute to achieving the following by 2030:

- Up to 61% of Guatemala’s indigenous population are stunted
- US$10.9m national strategy to prevent malnutrition, focused on indigenous pregnant women and children under age 2
- Investing in education and reducing school dropout rate helps cut adolescent pregnancy and early marriage
- 113 per 1,000 women is the adolescent birth rate in Bangladesh
- 596 maternal deaths per 100,000 live births in Cameroon

How the GFF partnership aims to achieve

- Reducing the GFF Trust Fund workforce in retaining financing to 2021
- 34.7m lives saved
- 35% fewer under 5 deaths
- 34% fewer neonatal deaths
- 5m mothers and children die from preventable conditions
- 275m stunting cases averted
- 33% fewer stillbirths
- 32% fewer maternal deaths

The GFF’s focus

Dedicated to the health and nutrition of women, children and adolescents – known as ‘RMNCAH-N’:

- 50 countries every year across the world

Investing

- 34% fewer under 5 deaths
- 33% fewer stillbirths
- 32% fewer maternal deaths

Issues we are tackling

- Due to a large annual health financing gap

- 61% of Guatemala’s indigenous population are stunted
- US$10.9m national strategy to prevent malnutrition, focused on indigenous pregnant women and children under age 2
- Investing in education and reducing school dropout rate helps cut adolescent pregnancy and early marriage
- 113 per 1,000 women is the adolescent birth rate in Bangladesh
- 596 maternal deaths per 100,000 live births in Cameroon

Who supports the GFF Trust Fund

- Canada
- UK
- Norway
- Netherlands
- Japan
- Denmark

Steps towards closing the funding gap

- How $2.6bn bridges the health financing gap

- GFF objective: Bridging the funding gap for health and nutrition

- GFF objective: Investing in primary and secondary care, maternal health, and reproductive health

- Issues: Accessing health services, quality health care, quality nutrition services, and addressing adolescent health

- More results achieved from existing resources and increasing domestic and external financing

- Strengthening systems to track progress, learn and course-correct

- Identifying priority investments to achieve RMNCAH-N outcomes

- Priority health financing reforms

- Health and Nutrition
- Reproductive
- Adolescent
- Maternal
- Newborn
- Child

- The GFF is the innovative approach to financing that helps countries significantly increase investment in the health of their people.
