

## GROUP WORK INSTRUCTIONS – Session #3

Session Title: Diagnosing RMNCAH-N Challenges and Root Causes

Session Presenter: Mark Hellowell

---

### Part 1: Identify priority problems and related markets (45 Minutes)

In this first part of the activity, you are asked to identify a set of RMNCAH-N priorities. Please use the table below (and provided to you in a powerpoint slide) to help you structure the analysis.

RMNCAH-N priorities	<i>Please list and describe in appropriate detail the key RMNCAH-N problems your country is facing</i>
Root causes	<i>Select a small subset (2/3) of these problems. Using the ‘Five Whys’ methodology, analyse the root causes of these problem.</i>
Private sector dimension? Yes? No?	<i>Of the identified problem, assess which of these has an important private sector dimension</i>
If yes, what market(s) are implicated in the problem?	<i>Select one key problem (based on its significance for RMNCAH-N goals, and the extent to which the private sector is implicated in the problem). Then, identify the relevant market(s) for further analysis</i>

### Part 2: Diagnose Market System Challenges (45 Minutes)

Using the Market Forces Template:

- (1) Identify the tools that are being currently being used to exert stewardship forces in the identified market(s).
- (2) Consider the impact of these tools on the balance between stewardship and market forces in the market(s).
- (3) Once you have reached agreement on these impacts, illustrate your analysis by completing the Market Forces Template (overleaf).

Use the Market Forces Template to illustrate how the tools of government currently deployed influence the balance of stewardship and market forces in each of the six domains. [Note that the location of the green bars has been set to depict a market in which stewardship forces are non-existent, and market forces are absolute. How do these shift as a result of the tools being deployed?]
